

FORGOTTEN MARRIAGES? MEASURING THE RELIABILITY OF RETROSPECTIVE MARRIAGE HISTORIES

Sophia Chae
Population Studies Center
University of Pennsylvania

March 20, 2012

INED – Quality and Comparability of Demographic Data in Sub-Saharan Africa

Introduction

- Retrospective marriage histories are often the best way to collect information on past marriages
 - Limitations
 - Recall error
 - Definition of marriage?
 - Unclear to what extent results are affected by these limitations
 - Validity vs. reliability

Research Questions

- What are the characteristics of marriages that are misreported?
- What are the characteristics of respondents who misreport marriages?
- How are marriage analyses affected by misreporting of marriages?

Marriage in Malawi

- Marriage is universal
- High rates of divorce
- Patrilineal & matrilineal kinship systems
- Polygamy is common
- Regional differences
 - ▣ North
 - ▣ Central
 - ▣ South

Data

- Malawi Longitudinal Study of Families and Health (MLSFH)
 - Formerly known as the Malawi Diffusion and Ideational Change Project (MDICP)
 - Three rural sites
 - Rumphi (North), Mchinji (Central), Balaka (South)
 - 2006 (MLSFH4) and 2010 (MLSFH6)
 - Detailed marriage histories and interviewer data
 - Analytic sample (1,148 women & 719 men)
 - Ever been married by 2006
 - Interviewed by main survey team in 2006 & 2010
 - Reports of number of times married = number of spouses reported in marriage history

Methods (1)

- Part I: Match marriages across surveys using spouse names and dates of marriage

Matching process, by gender, 2006 and 2010

	<u>Men</u>	<u>Women</u>
Number of marriages reported in 2006	1225	1593
Number of marriages reported in 2010	1109	1480
Difference (2006-2010)	116	113
Match rates		
% marriages reported in 2006 also reported in 2010	84.7	89.5
% marriages reported in 2010 also reported in 2006	93.6	96.3

Methods (2)

- Part II: Reconstruct marriage histories (RMH)
 - Marriage order
 - Year marriage began
 - Status of marriage
 - Still married
 - Separated/divorced
 - Widowed
 - Year marriage ended

RMH Match Statistics

	<u>Men</u>	<u>Women</u>
<u>Marriage-level</u>		
Unmatched marriages (%)	18.8	12.9
Number of marriages	1369	1728
<u>Individual-level</u>		
Did not report at least one marriage (%)		
All respondents	26.2	16.3
Married more than once ^a	51.8	46.0
Did not report multiple marriages ^b (%)	22.5	15.6
Number of respondents	729	1138

^a Refers to respondents married more than once by 2006 survey

^b Among those who did not report at least one marriage

Statistical Analyses

- **Outcome 1: unmatched marriage**
 - Restricted to marriages that took place before 2006
 - Regression: multinomial logistic regression
 - Base outcome = matched terminated marriage
 - Other outcomes = unmatched terminated marriage, current marriage
- **Outcome 2: reported consistent marriage start date**
 - Restricted to matched marriages
 - Regression: logistic regression
- **Outcome 3: reported consistent marriage end date**
 - Restricted to matched terminated marriages
 - Regression: logistic regression

Independent Variables

□ Individual

- Age, age squared, region of residence, education, inconsistent reporting of survey responses (level of education, number of children ever born, number of lifetime sexual partners)

□ Marriage

- Marriage order, years since marriage began, short duration marriage, status of marriage

□ Survey

- Interviewer knows respondent's family (2006), degree of cooperation, length of survey time (2010)

□ Interviewer (2010)

- Age, age squared, male, ever married, has prior interviewing experience, lives outside district of respondent
 - Problem: 2006 interviewer data is missing for 28% of sample

Marriage Statistics: 2006/2010 vs. RMH

- Marriage Statistics
 - Age at first marriage
 - Number of times married
 - Ever divorced
 - Number of times divorced
 - Ever widowed
- Paired t-test or Wilcoxon signed rank sum test

Reported Number of Times Married in 2006 & 2010, Men

		2010								
2006		1	2	3	4	5	6	7	Total	
	1	337	51	6	0	0	0	0	0	394
	2	58	137	19	4	2	0	0	0	220
	3	13	23	36	9	1	1	1	84	
	4	8	4	3	5	1	1	0	22	
	5	1	0	3	1	2	0	0	7	
	6	0	0	0	0	0	0	1	0	1
	7	0	0	0	0	0	0	0	0	0
	8	0	0	0	0	0	0	0	0	0
	9	0	1	0	0	0	0	0	0	1
Total	417	216	67	19	6	3	1	729		

Reported Number of Times Married in 2006 & 2010, Women

		2010							
		1	2	3	4	5	6	7	Total
2006	1	733	49	3	0	0	0	0	785
	2	70	165	32	2	1	0	0	270
	3	12	21	31	5	0	0	0	69
	4	1	2	4	3	0	0	0	10
	5	2	0	0	0	0	0	1	3
	6	0	0	0	1	0	0	0	1
Total		818	237	70	11	1	0	1	1138

Odds Ratios of Unmatched vs. Matched Marriage

<u>Statistically Significant Variables</u>	<u>Men</u>	<u>Women</u>
Individual Characteristics		
Age	1.00	1.20***
Age squared	1.00	1.00***
Inconsistent reporting of: # lifetime sexual partners	1.26	3.64***
Marriage Characteristics		
Short duration marriage	3.51***	4.61***
Interviewer Characteristics (2010)		
Has prior interviewing experience	0.53*	1.62+

*** p<0.001, ** p<0.01, * p<0.05, + p<0.10

Discrepancies in Marriage Start Dates

Discrepancies in Marriage End Dates

Figure 2. Discrepancies in Marriage End Dates (MLSFH4 - MLSFH6)

Note: Restricted to terminated marriages where marriage end date was reported in both MLSFH4 and MLSFH6.

Odds Ratios of Reporting Consistent Marriage Start Date (1)

<u>Statistically Significant Variables</u>	<u>Men</u>	<u>Women</u>
Individual Characteristics		
Region of residence (ref = Central)		
South	0.42***	0.40***
North	0.82	0.88
Completed 5+ grades of schooling	1.50*	2.03***
Inconsistent reporting of:		
# children ever born	1.05	0.50**
# lifetime sexual partners	1.06	0.69*
Marriage Characteristics		
Marriage order (ref = First)		
Second	0.53**	0.68+
Third or higher	0.61+	0.97
Short duration marriage	0.85	0.63*

*** p<0.001, ** p<0.01, * p<0.05, + p<0.10

Odds Ratios of Reporting Consistent Marriage Start Date (2)

<u>Statistically Significant Variables</u>	<u>Men</u>	<u>Women</u>
Marriage Characteristics (cont'd)		
Status of marriage (ref = still married)		
Divorced	0.81	0.75
Widowed	0.35*	0.58*
Survey Characteristics		
Degree of cooperation in 2010 (ref = good)		
Very good	1.01	1.10
Average/bad	1.01	0.68*
Length of survey time in 2010 (ref = middle)		
Short	0.64*	1.12
Long	0.95	1.00
Interviewer Characteristics (2010)		
Has prior interviewing experience	1.68*	0.86

* p<0.05

Odds Ratios of Reporting Consistent Marriage End Date

<u>Statistically Significant Variables</u>	<u>OR</u>
Age	0.89*
Completed 5+ grades of schooling	2.25**
Short duration marriage	0.45**
<u>Significant Gender Interactions</u>	<u>OR</u>
Male	2.21*
Ended in Widowhood	2.14*
Male X Ended in Widowhood	0.19**
Interviewer lives outside district of respondent (2010)	2.25*
Male X Interviewer lives outside district of respondent (2010)	0.10**

Marriage-related Statistics (means)

		<u>2006</u>	<u>RMH</u>		<u>2010</u>	<u>RMH</u>	
<u>Men</u>	<u>Variables</u>						
	Age at first marriage	22.2	22.0	***	22.4	22.0	***
	# times married	1.68	1.78	***	1.62	1.88	***
	# times divorced	0.47	0.53	***	0.43	0.64	***
	Ever divorced (%)	34.6	37.4	***	30.0	41.8	***
Ever widowed (%)	7.6	8.7	**	7.8	9.7	**	
		<u>2006</u>	<u>RMH</u>		<u>2010</u>	<u>RMH</u>	
<u>Women</u>	<u>Variables</u>						
	Age at first marriage	17.8	17.7	***	17.8	17.7	
	# times married	1.40	1.45	***	1.37	1.52	***
	# times divorced	0.42	0.45	***	0.39	0.54	***
	Ever divorced (%)	34.0	35.2	*	29.0	37.3	***
Ever widowed (%)	10.0	10.6	*	12.7	12.4		

% Respondents Who Report Inconsistent Number of Times Married Across Survey Waves

			Later Survey				
			2004	2006	2008	2010	Total
Men	Earlier Survey	2001	7.3	7.3	14.6	15.2	328
		2004	-	11.6	15.9	17.5	447
		2006	-	-	14.1	15.1	608
		2008	-	-	-	10.5	608

			Later Survey				
			2004	2006	2008	2010	Total
Women	Earlier Survey	2001	9.9	10.2	15.3	15.4	629
		2004	-	7.3	11.1	11.6	765
		2006	-	-	10.6	10.1	976
		2008	-	-	-	9.2	976

Main Findings

- Significant amount of underreporting of marriages exists in MLSFH
 - ▣ Men are more likely to misreport marriages than women
- Underreporting of marriages and inconsistent reporting of marriage dates do not appear to be random
- Marriage-related statistics are affected by underreporting of marriages
 - ▣ Underreporting is a more serious problem in 2010
 - Possible explanation → panel conditioning
- Limitation
 - ▣ Some respondents may consistently underreport the same marriages
 - True number of marriages is likely higher

Discussion & Implications

- Are retrospective marriage histories reliable?
 - 26.2% of men and 16.3% of women omitted at least one marriage
 - Better recall of marriage start dates than end dates
- How does misreporting of marriages affect research?
 - Depends largely on the research question and type of misreporting
- What does this mean for large-scale surveys collecting marriage data?
 - Retrospective marriage histories are probably not capturing all marriages
 - Levels of misreporting will depend on local marriage patterns
